RATES AND ROUTES SEARCH

Use this page to find oil pipeline routes and associated rates that meet your search criteria. Criteria include origins, destinations, pipeline names, and commodities (Crude Oil, Intermediate Products and LPG, and Refined Products). Available rates are those that are currently effective in tariffs filed with FERC or with the Canadian NEB. The database also includes rates from intrastate tariffs as well as non-jurisdictional rate sheets.

The Search process includes two steps. First enter your criteria, then click "Search Rates." The Search Results include summaries of the routes and rates that meet your criteria. In order to view detailed information on those routes, select the ones that most closely match your criteria, then click "Compare Selected Rates." You also have the option of exporting the results as an Excel document, which you can download for further analysis.

The Search Results include links to the actual tariffs, including the appropriate governing rules tariffs. Just click the Tariff Number to view the tariff.

We can set up a custom Search Page designed for you around a specific set of criteria. This could be particularly useful for monitoring rates to or from specific markets on a regular basis. Please do not hesitate to call or email with questions or comments.
